

Key to Milne's Plane and Solid Geometry

Filesize: 4.17 MB

Reviews

The ideal publication i at any time read through. It really is writter in easy phrases and never difficult to understand. Its been designed in an remarkably easy way which is merely right after i finished reading through this publication by which actually transformed me, affect the way i think.

(Jaqueline Flatley)

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1899 Excerpt: .const., $EH = FG = EF = HG$; hence, EFGH is a rhombus, and, as in Ex. 601, EFGH--ABCD. Sen. As in Ex. 601, there may be an indefinite number of solutions. Ex. 604. Construct a rhombus having a given altitude and equivalent to a given parallelogram. Solution. From data find the side of the required rhombus as the altitude was found in Ex. 603, and construct the rhombus as in that exercise. Ex. 605. Transform a triangle into an equivalent parallelogram, whose base shall be the base of the triangle and one of whose base angles shall be equal to a base angle of the triangle. Solution. Through E, the middle point of side AC of the given $\triangle ABC$, draw $ED \parallel AB$ meeting BC in D; produce ED to F making $DF = ED$; and draw BF. Then, ABFE is the CD required. Proof. $EF \parallel AB$, and since, $ED = AB$, $EF = AB$, and, $\angle BFE = \angle ABC$. $\therefore ABFE$ is a \parallel gm. Cons. \therefore , $DF = ED$, $DB = CD$, and, $\angle BDF = \angle C$; $\therefore BDF = AEDC$; consequently, $ABDE + ADFB = ABDE + AEDC$; that is, $ABFE = AEDC$. Ex. 606. Construct a triangle having a given angle, and equivalent to a given parallelogram. Solution. Draw the altitude h of the given \parallel gm ABCD. Draw $EF = AB$; at E erect the \perp $EH = 2h$; and draw $HJ \parallel EF$. Construct $\angle FEH =$ the given \angle , the side EG meeting...
